THE TOIKE TOOL BOX

While leafing through the local hardware catalogue, we noticed a few typographical errors. This put a new light on the descriptions that followed. For example:

BOX WENCHES: Supreme quality 45°, 6-piece set. A highly-polished, deluxe set to satisfy the most exacting demands. Lightweight and tough. Cleanly-broached sockets. 12 openings.

BRITISH-SIZE WENCH SET: Same quality as above but with four 30° box wenchers milled to fit English equipment.

15° and 30° OFFSET BOX WENCH SET: For easier handling in tight places. Thin strong walls with 12-point sockets accurately broached for a perfect fit in 10 sizes. Heat-treated and durably finished for tough usage. Specify angle.

MIDGET DRIVE SET: Has 4-inch 'L' handle. Also internally-knurled socket for loosening damaged nuts.

4-IN-1 SOCKET WENCH: Adjusts automatically to fit in 4 graduations. Plated for long rest-free service. Attractively boxed.

14-PIECE BOX AND OPEN-END WENCH SET: In handy tool roll. Designed for maximum utility, with box end offset at 15°. Lengths vary with size for plenty of leverage. For heavy-duty professional use.

TORQUE WENCHES: Indicate exact tension. Necessary for most high-compression types to avoid distortion when tight.

OBSTRUCTION-TYPE WENCHES: Thin-type wenchers with same size openings on both 45° and 90° ends. Set of 7 sizes.

THICKNESS GAUGES: For adjusting clearances. Wide assortment, including extra-length Swedish.

NUT DRIVERS: Colour coded hollow-shaft nut drivers fit spanner nuts; projecting keys go into slots. Twelve wenchers in all in an attractive leatherette case. Also available in metric sizes for use with European equipment.

NUT SPLITTER: Splits open jammed or rusted-on nuts for easy removal. Takes all sizes, splits them without damage to bolt. For use with small size wenchers.

COMBINATION DRAWER UNIT: Big capacity chest is handsomely styled with your convenience in mind. Gleaming finish will take plenty of hard knocks - won't chip or crack. Comes with easy-sliding drawers. Positive stops prevent falling out even when fully open. Our finest chest and best value buy.

Complete with 2 keys and carrying handles. Ideal for all craftsmen - amateur or professional.

HEAVY-DUTY TOOL BOX: The king of all chests. Choice of four types of extra-deep drawers. Drawers open fully for easy access - glide open smoothly on non-spill slides. Extra convenience for mobile servicemen - makes tool selection easy!

REVOLVING TOOL RACK: New! Sturdy compact tool holder with ball base to swing tool into easy reach.

SMALL PARTS CABINET: A special model for non-engineers.

OUTSIDE STARTER SWITCH: Remote control switch makes one-man servicing easier - allows you to turn over without getting in and out. Consists of two heavily-insulated alligator clips, 5-foot connector, and easy-grip hand switch.

FLEXIBLE DRIVE COMPRESSION TESTER: Easily gets around all obstructions. Cannot be harmed by hot exhaust. For use in both 14 and 18 mm. holes. With side release valve for successive action.

IMPACT TOOL: One-half inch square-drive (experts only) impact tool with 1001 uses. 1900 impacts per minute. Use to set nuts, screws or studs... ream, tap, drill, wire brush. Extra-deep sockets available. Very powerful.

ADJUSTABLE WENCH: Chromium plated. Special method of finishing prevents the tool from becoming slippery when used with wet or oily hands. All sizes held firmly and rigidly during use. Accurately machined to ensure smooth working parts. Selective process of hardening provides hard surface with interior toughness. Available in standard or heavy-duty, with or without taper.

FAMOUS PETERSON VISE-GRIP WENCH: Does difficult jobs with unbelievable ease. Powerful double-lever action enables the grip of one hand to lock the quickly adjustable jaws with more than a one ton grip, but releases quickly with one finger. With involute jaw curve that grips tightly on square, hex, or round stock - even small work with the tip of the knurled jaws. Also comes with powerful cutting jaws - easily cuts ordinary wires or small bolts.

"GRIFFIX" LOCKING WENCH: Similar to above, but with exclusive instant adjustment feature. Just a flick of the thumb does the trick.

EXTRAORDINARY

A number of you may have noticed, during the recent events of the last few weeks, an incredible profusion of truly the strangest instruments, now making their appearance in the reknown LGMB. During the slave auction, one recent member was observed to be playing a large empty cask. The frosh was very happily putting a cork into the keg, and blowing into the cask hole, succeeded time after time in blowing the cork out of the bung hole.

This was no doubt a very clever performance, but if the man had put his mouth to the cork hole, and then blown the cask out of the bung hole, or if he had put his mouth to the cask and blown the bung out of the cork hole, or if he had put the cask to the bung hole and blown the cork out of his mouth, or if he had put the bung

to his arsehole and blown the cask out of the cork hole, or if he had put his arsehole to his mouth and blown the cork out of the bung hole, or if he had put the cork up his arsehole and blown his mouth out of the bung hole, or if he had stuffed his arsehole up the bung hole and blown the cork hole inside out through the cask hole, or if he had blown his arsehole up his mouth and pulled the bung hole out of the cask hole, or if he had stuffed himself up his arsehole and blown the cask up his bunghole, or if he had stuffed the cask hole and the bung hole in his mouth and blown himself out his arsehole, or if he had blown the cask hole up his arsehole and blocked his bung hole up with the cork - it would have been, in our opinion, much more extraordinary.

Engineers Desire Free Woman

This is yet another Toike Oike castigation of women (Germaine Greer joke). In the passed (Varsity) we have been accused of being "a sexist paper filled with the myth of women's inferiority and oppression," by a member of the women's cirkus. We have never accused women of being inferior. On the contrary, any engineer can tell you they are much better. As for oppression, it is a well known fact that women of today have more openings than ever before. Have you ever heard an engineer complaining about the braless look? As a matter of fact, any women feeling the urge to remove her bra could have found the utmost encouragement at the recently held slave auction. Seriously, the real sexist are the puritanical neo-Victorian attitudes that killed the male slave auction. It seems that women do not yet consider themselves able to show active interests in sex. Surely, Mrs. Greer would support such an event? It would seem to me that the women of the University are far more sexist than the Toike. If Miss Curtin or anybody else dislikes our attitudes she is quite free to write an article for submission? (Sorry about that). The image of an engineer has always been in perfect accordance with the doctrines of the Women's Liberation Movement. Never have engineers supported marriage! Never have they counteracted the morality of bourgeois society (How about that! An engineer who can spell "boor-juice". Sexual freedom is instilled (distilled) into every engineer at

an early age. We have a most profound respect for working women in every field of Endeavour. Engineers see nothing wrong with the female superior position (!) especially after a hard (!) day at Skule. Day-care centers? Engineers love to have the little bastards off their mother's er, backs. Employment? We are not at fault for the lack of female engineers (a recent gallop pole shows that 99.3 of all engineers abhor the lack of women in the faculty. The other 7 don't want competition), rather it is the social attitude which encourages women to go into courses as half assed and useless as liberal arts.

The female artsie is betraying her sex - an unemployed B.A. in political science, sociology, or astrology is bugger-all in improving the lot of women in society. An engineer, at least, is qualified to do something in the real world. You will not free yourself from castrated Victorian attitudes by taking courses that fit you only for castrated Victorians, housewifery, nor by ignorant mouthings at the few men who support you with more than lip-service, but rather by intelligent intercourse with "the People" who are not to be found near the Varsity.

CUMMING UP

Nov. 4 Get ready for a new way of life - a life without fear, hatred, and starvation. A new world for all. Tomorrow, the world will change!

Nov. 5 At 11.47 a.m., get up on your desk and jump; this will save Ontario from disruption.

Nov. 5 'The Owl and the Pussycat' at 8 p.m. Entrance \$1.00. Presented by the Food Sciences Society in the Gillian Massey building at Bloor and Avenue Rd.

Nov. 13 Industrial Club Party, 8 p.m. at I.S.C. Fully licensed and stocked bar and food. Admission 50c. All invited.

Nov. 17 "Nuclear Energy in Canada" is the topic for the second in the series of evening technical smokers organized by the Canadian Society for Mechanical Engineering Student section. Speaker and slides from A.E.C.L. Cheap cash bar - free refreshments - everyone welcome. 7:30 p.m. student common room, Mechanical Building. C.S.M.E. student members free admission. All others 50c. Watch for posters soon.

Nov. 17 Chem Klub Xtravagaza. First orgy (dinner) of the year at the Wedge Wood Restaurant, Jane & Bloor (at the subway). FROSH especially should attend the dinner, which should prove informative (revealing) and fulfilling. Dinner tickets \$3.00 each at Chem Eng. Dept. Office. Lubricants will be on sale cheap.

This column is reserved for up and cumming events on campus. Deadline for copy is the Friday preceding the issue.

The SHADOW FADES

(I Don't Show up Well in Starlight)

The 23rd Psalm in an Engineers Sweetheart
Verily I say unto you, marry not an engineer,
For an engineer is a strange being, and is possessed of many evils.
Yea, he speaketh eternally in parables which he calleth formulae.
And he wieldeth a big stick which he calleth a slide-rule.
And he hath only one bible, a handbook.
He thinketh only of stresses and strain, and without end of thermodynamics.
He showeth always a serious aspect, and he seemeth not to know how to smile, and he picketh his seat in a car by the springs therein and not by the damsel (Oh yea!)
Neither does he count a waterfall except by its horse-power, nor a sunset except that he must turn on his lights nor a damsel except by her live weight.
Always he carrieth his books with him, and he entertaineth his sweetheart with steam tables.
Verily, though his damsel expecteth chocolates when he calleth, She openeth the package but to discover samples of iron ore.
Yea, he holdeth his damsel's hand but to measureth the friction thereof.
And he kisseth her only to test the viscosity of her lips.
For in his eyes there shineth a faraway look that is neither Love nor longing - rather a vain attempt to recall a formula.
There is but one key to his heart, and that is Engineering Society, and When his damsel writeth of love and signeth with crosses, he Taketh these symbols not for kisses, but rather For unknown quantities.
Even as a boy he pulleth a girl's hair but to test its elasticity.
But as a man he discovereth different devices;
For he counteth the vibrations of her heartstrings; and He seeketh ever to pursue his scientific investigations even, his own heart fluttering he counteth as a vision of beauty and enscribeth his passion as a formula.
And his marriage is as simultaneous equation involving two unknowns, and yielding diverse results.

Amen

The sermon of the week was gleaned from TOIKE OIKE, Vol. XXV, No. 5, January, in the year of our lord MCMXXXIV (1934). THE SHADOW sincerely hopes that the graduating engineers of today are not just calculating machines but real people who can see the beauty and natural wonders in the world. Let us have more engineers—who appreciate all that exists in the world, rather than ones who must mechanically destroy it.

Did you notice they weren't gross too????

THE SHADOW also has discovered the supreme quality available in TOIKE OIKE editorials. Here it cums:

EDITORIAL:

Wanna buy a duck?

Toike December 1933

Remember... THE SHADOW KNOWS
ny-ah-ah-ah-ah-ah-ahhhhh...

The hitch in this was, of course, the fact that one had to cram all this stuff into one's mind for the examinations, whether one liked it or not. This coercion had such a deterring effect upon me that, after I had passed the final examination, I found the consideration of any scientific problems distasteful to me for an entire year. In justice I must add, moreover, that in Switzerland we had to suffer far less under such coercion, which smotherers every truly scientific impulse, than is the case in many another locality. There were altogether only two examinations; aside from these, one could just about do as one pleased. This was especially the case if one had a friend, as did I, who attended the lectures regularly and who worked over their content conscientiously. This gave one freedom in the choice of pursuits until a few months before the examination, a freedom which I enjoyed to a great extent and have gladly taken into the bargain the bad conscience connected with it as far by the lesser evil.

It is, in fact, nothing short of a miracle that the modern methods of instruction have not yet entirely strangled the holy curiosity of inquiry; for this delicate little plant, aside from stimulation, stands mainly in need of freedom; without this it goes to wreck and ruin without fail. It is a very grave mistake to think that the enjoyment of seeing and searching can be promoted by means of coercion and a sense of duty.

Wrong Again

As per usual, that "other paper" on campus - you know, the one used for wrapping dead fish - has got things wrong again. Of course this is nothing unusual but in this instance that "other paper" has been misrepresenting us to the campus again.

Now it would be an easy matter to check things out first through proper information sources but then maybe the headlines and copy might not read as well. It might be pointed out, just for the record that the Toike Oike received \$1,500 from SAC this year and that this money came from the Communications Commission Budget just the same as for that "other paper" and Radio Varsity. The money did not come from the Services or External Affairs Commissions.

Dear Mom & Dad, Have gone to Chicago to seek fame and fortune. Don't wait up.
-Love, T.R.

AGREEMENT OF CONSENT

THIS CERTIFIES THAT I, the undersigned misfit would like to enjoy intercourse with the TOIKE STAFF, am below the legal age of descent, am of unsound mind, and am definitely under the influence of everything imaginable. Although I realize that the force, threats, and promises used by the TOIKE STAFF are false, I have allowed them to influence my actions.

FURTHERMORE, I am in mental fear of the TOIKE STAFF, fully expect to be conned into a long term contract. I don't know if this constitutes a conflict of interest, and don't care. I am constantly in a drunken stupor and I am entering into this relationship with the TOIKE STAFF because I love it and want it as much as they do, and if I receive satisfaction I will be willing to participate again in another two weeks.

FURTHERMORE, if any pregnant phrases should develop from this intercourse, I irrevocably release and absolve the TOIKE STAFF of all responsibility whatsoever including support for the offspring.

FURTHERMORE, I will not act as witness against the TOIKE STAFF, nor will I prosecute them for slandering my name.

FURTHERMORE, I warrant that I will receive no monetary reward from the TOIKE STAFF for any of the actions stated above.

GODIVA'S BOX

Dear Godiva:

I heard you were having problems of your own (unusually heavy flows, dizziness, cramps etc. . . things like that) since you're always laying such sage advice on us, I wanted to do something for you. As a truly fearless and resourceful engineering son of your bod, I started to look for an answer to some of your problems and minor irritations.

My excessively extensive and exhaustive cogitations finally made me cum up with a solution. I've sent along a small part of my fabulously absorbent streetcar transfer collection, (where the number of transfers

$$= \lim_{\theta \rightarrow 0} \theta$$

These represent the travels of a lifetime (to all the important drinking establishments in town). When that magic time of the month oozes around again you can use them to stem the swelling tide until you find something better. Enjoy them in good health,

Yours to the end,
Skuleman.

Dear End:

Thank you for small kindnesses. I am returning your transfers unused (for the most part) as I have just discovered the 'Varsity' to be a miracle absorber.

Dear Godiva:

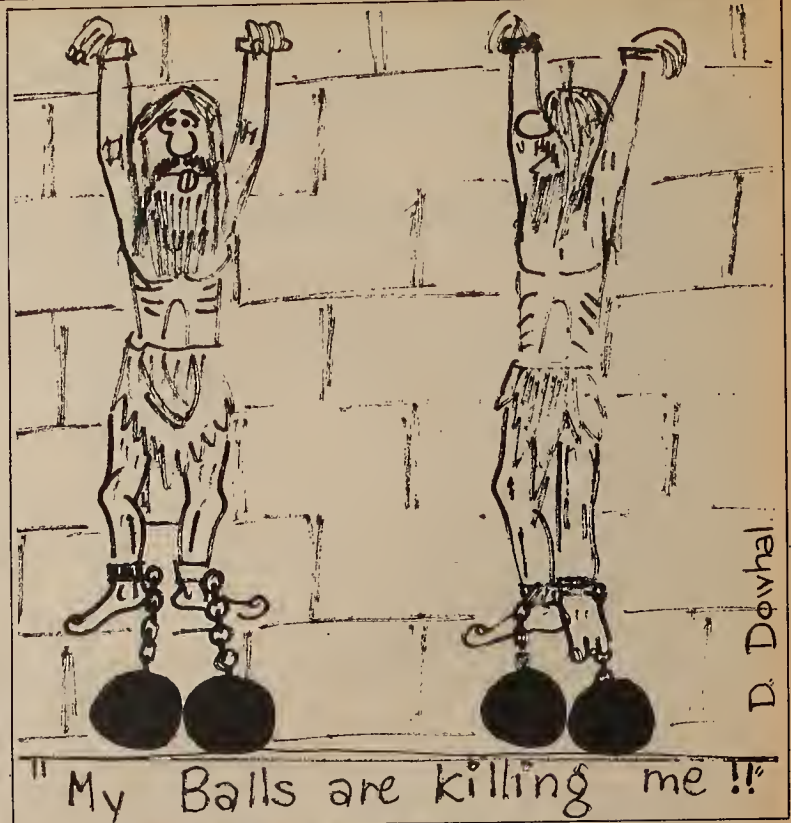

Up until recently I was a sweet, pure and innocent young thing. Then Zygye entered my life (to mention only one of many things). I mean to say it was a dragged down, knocked up violation, (or was that knock down, drag out). Anyways he had cum and gone by 10:30 and left me holding the bag. What should I do?

Angel Eyes

Dear Angel Eyes:

Don't ask.

P.S. 7T3 Mechanical put him up to it.

Mind-Blowing Possibilities for Engineers

Responding to a letter from Eric Miglin, a group of us got together a few weeks ago to discuss the formation of a faculty-wide committee to provide such things as seminars, multi-disciplinary technical activities for students in all departments, paper competitions and conferences. We threw the idea around and became very excited by it. We talked about such things as "Collective Bargaining for Engineers, The Engineer's Role in Society and What is an Engineer?" for possible discussion topics.

The Engineering Society decided to create the Professional Relations Committee. The chairman of the new committee was (conveniently) one of our number. We decided that in addition to Professional Relations (Communications with A.P.E.O., E.I.C., Alumni Association) this committee could handle the program we were talking about.

John Cowan of the C.S.M.E. said that his group was planning a "How to Interview" meeting soon, before the fourth year job interviews. There would be speeches by two or three speakers (as yet unannounced) on what strategy to use in your interviews. John conveniently threw this

meeting open to all fourth year students as the first activity of the Committee. Watch for more details about it on our posters. We are planning a week-long series of discussions, film shows, speakers in late January or early February called "Synergetics '72". We are just beginning the planning of this project. We invite anyone who is interested in helping to organize it to contact one of us and we will inform you about our next meeting (when we know when it is).

THE EXCREMENT

ENGINEERS WIN FLOAT PARADE

Judges Strike Back

TRAWNA (TOPI) - The Engineering Society's Float in this year's homecoming parade was up to usual standards. Not only was it the best float in the parade, it was the most illegal. Thirty-one infractions were counted, breaking the long-standing record of 11. Throughout the traditional Friday night float-building, rain dampened the Engineers' spirits, but (they) drank them just the same. Somehow, a float appeared Saturday morning, and the plastered plumbers thrust forth yet another unbeatable erection into the parade.

The merry crew of BFC and Nurses proceeded along the parade route, bringing joy and "smiles" to the entire city. They systematically broke every rule provided by the Float Committee and then proceeded to break some Metro Toronto rules too.

The grand finale came in front of University College. As soon as the float stopped, the judges stand was engulfed in smoke. (Chief note: The BFC denies all knowledge of the two 75c, one-minute Safety Supply smoke bombs placed under the judges table and denies the complicity of the Minister of Information.) Suddenly the signal was given "Fire!" and the purpose of the beer bottles, wine cask and garbage can became clear. Immediately, 137 hard hats full of water and 69 wet Varsitys cascaded down upon the officials and their previously legible score-sheets. The apparently victorious Skulemen remounted their erection and pulled out.

The judges had an ace in the hole, so to speak. Within a half-hour, they struck back and declared the Engineers winners. Despite Chairman Pike's furious protestations, the administrators refused to disqualify the float, and broke yet another Skule tradition.

Having no choice but to appear at 1/2 time of the ensuing football game, the Blue and Gold committee provided the spark needed to turn the game around in Varsity's favour. CHCH-TV secured a major coup by running commercials instead of the DeLaSalle band, and reserving a special time slot for U of T's disappointed but victorious Engineers.

PROLOGUE: Amid rumours of lawsuits against the judges for failing to comply to their own rules, the U of T police for dereliction of duty, the Blue and White for infractions of their parade permit, and the Metro Police for being out of uniform, Chairman Pike was heard to mutter, "Boy are we gonna get those bastards next year!"

To: UTENGSOCEXECOMM

From: D.G. Pike
Gentleman, Nancy, Eleanor,
Enor, Paul:

As you know the prime (and indeed only) function of the Blue and Gold Chairman is to assume responsibility for the Engineering Society entry in the Homecoming Float Parade.

This year we once again erected unquestionably the finest float in the parade. The most significant aspect of the Skule Homecoming Tradition however, is the amazing and original way in which we get ourselves disqualified each year. However our own singular efforts

backfired. I must admit total failure and assume all responsibility for our disgrace. We won.

So acutely do I feel the loss of a fine Engineering tradition, that I must expiate my sins.

Therefore I hereby submit my resignation from the UT EngSocExecComm as Blue and Gold Chairman.

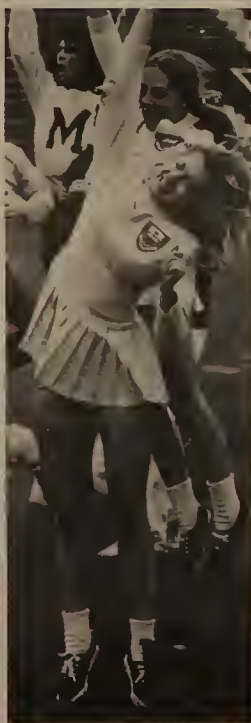

Lose one for the Gipper!
Chiefly,

D.G. Pike

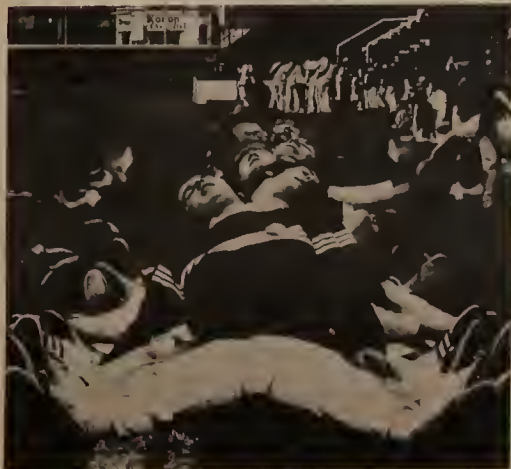

If Batman can do it.

UNHH!

SCREAM & SHOUT

Meanwhile, down on the field, the cheerleaders were having an on-and-off day. Following the parade, they challenged the Queen's cheerleaders to a friendly game of Indian (losing is so much fun). Then it was up on the field for 34-D through 69-G. And so it went: Miller free-wheeled; Pat Watched horn; Brian pushed Sue up; Greg showed the new recruit how; Shelley charged low, but Paul loved it. Blaine took Linda for a ride; Ken fondled; Steve bore Cary; Gretchen was all over everybody piled on Judy; and after every score, the girls came up on top.

Crowd—Pleaser

ANGEL EYES

You want what?

BEAUTY & THE BEAST

THEIR MISTEAK

We feel that it is our obligation to correct the story about the slave auction as reported in the B... Varsity. This is how it was.

At approximately 12:00, daylight savingtime, in a dungeon of the Sanford Felming building a balcony was violated.

12:01 there was a class in aerospace vehicle manufacture held in the room. An area of 48 schlongs was covered in an in-depth study of the adaptability of IBM cards to the aircraft industry. Also a class in basic projectiles and advanced gunnery initiated their own ballistics studies. Within 15 minutes, the layer of failed models covered the floor to a depth of half a foot. The animal show continued for an hour. The 7T3 Mechanicals were in the balcony supplying the majority of the entertainment. It was rumoured that the EUT had hurriedly ordered a special shipment of job cards sent in.

The first three slaves ran (came?) smoothly, but then Angel Eyes arrived. It cost \$60 for Angel Eyes to cum. It was then apparent why the mechanics were in the balcony. Its oscillations were due to an incredible type of up and down motion of the hands; many, many hands, in fact.

There was also a lot of action up front. J.B.R., jealous leader of the LGMB, dropped his bone, and went limp before the dancing of the "Quivering Crack". Andy Young was much better off. His erect bone was keeping perfect time with the vibrations emanating from the stage, and he seemed to be approaching a climax.

All during the show, assorted weird photographers were racing around with their legs crossed, shooting from all angles. The use of telephoto lenses at such short range was hard to figure out. The show was a little too much for the Band's female token, Harriet. When the cans shook out white, Harriet turned red; Before turning blue she crawled out, and left the band squirming without her support. In the end, Angel Eyes went (the Band came) for \$160. It is plain to see that 7T3 mechanics took economics, as this was a 250% increase in value.

The main attraction was over, the dungeon quieted down and the balcony stopped oscillating with a sigh. Many of those who survived the hole auction, came out dripping due to the tremendous heat of friction generated between members and levis, which jocked up the temperature to approximately 50 degrees celcius.

footnote: After her magnificent performance, Angel Eyes was given a massive standing ovulation for her enthusiastic participation in our famous annual event.

So there it is sports fans, another year's auction survived. Aren't you proud of yourself! And to those fools among you who missed it this year, the tough titty committee says "5%!" and better luck next year, Ken.

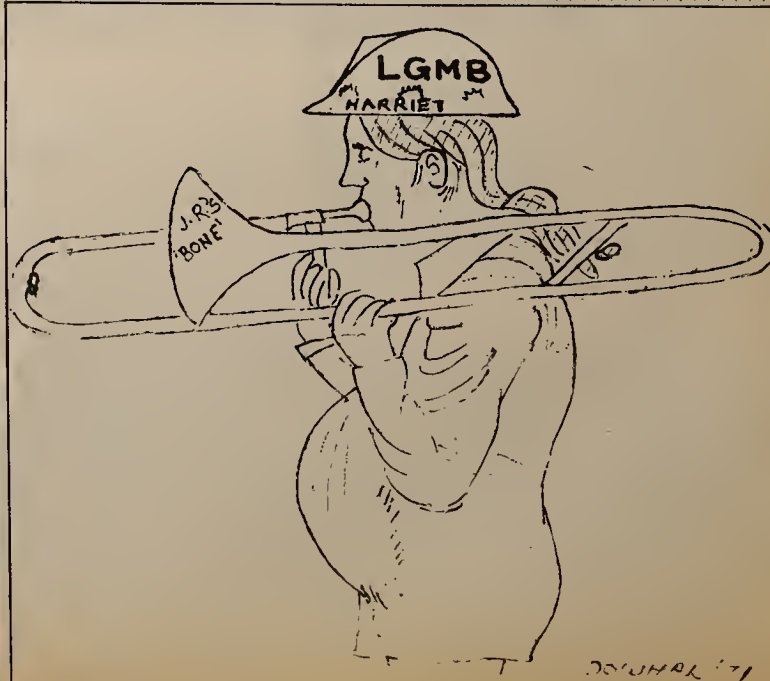

TOIKE OIKE - TRUE CONFESSIONS

I took out a stripper as told by Zyg.

My initial reaction was only shock. How would I ever be able to stand up for my wife again. I had never won anything before in my life and I figured why this, why me, WHY? And then I thought - why not. I realized that I was the man for the job. Angel Eyes turned out to be a really interesting person. Along with the occupation which she so well portrayed for us all, she works in other fields (pastures) as well.

Angel seems to enjoy her work. When I arrived at her place I found that she had two friends. How was I going to satisfy all three of them? It was decided we go to the theater and watch the Mask of Oscar Wilde. The play was centered around the topic of homosexuality which set the mood for the evening. After the play we returned to her apartment. The real test was now at hand. How was I going to satisfy Angel and her friends. I

simply had to prove myself as I took on this assignment figuring I was the man for the job. I figured my first obligation was to Angel but I did keep both of her friends busy. And in the end it all worked out. Needless to say I have been applauded by my fellow skulemen and have given a lecture in class about the fine points. I wish to, thank the 7T3 Mechanical Class for this opportunity. In conclusion - it was the best damned dollar I ever spent.

And all because of Jim Richardson's bone!

There's NO Second Time

SPORTOIKESPORTOIKESPORTOIKESPORTOIKESPOR

ye editor

Ho Hum. Another Sportoikes. So what?

I'll tell you what: yours truly has been getting some complaints about the amount of my artwork (or lack thereof) appearing in the Toike. Ok, Ok, I can take a hint!

From now on, more pictures, less literary. (This column will continue; I feel like having an outlet for my hot air.) So, at the right you have my personal view of sports, in cartoon form. Right? Ri-i-ight.

One more personal view: the Argos are gonna blow it again this year. Why us? why is it always US?

— Ron Jamieson

More on
S-Points

In the last issue, S-point awards for team participation were described. Points are also awarded for sports in which competition is on an individual basis. Hopefully this will get some more Skule athletes to come out of hiding. Most of the individual-type competitions, except swimming (which is run by the Athletic Association), are run by the Intramural Office, Rm 106, in Hart House. If you're interested in any of these sports head for Hart House and see Miss Boyd.

Points for participation in any sport like track and field, Indoor Track, Swimming, Golf, Tennis, Skiing, Wrestling, Fencing, Gymnastics, Badminton, and S Squash are awarded. One (1) point is achieved for just going in the tournament and not winning anything. BUT, for all of the Engineers who win in these events, more points are awarded.

For track, swimming, sking, and gymnastics, points are awarded per event as:

First	4 points
Second	3 points
Third	2 points

For golf and harrier (whatever the hell harrier is doing or was doing I don't know!!!) the points are:

First or second	8 points
3rd, 4th, or 5th	6 points
6th, 7th, or 8th	4 points
("Harrier where are you?") — Harrier	2 points

For those who play in the tennis, squash and badminton tournaments points are for placing:

Champion	8 points
Finalist	6 points
Semi-Finalist	4 points
Quarter-Finalist	2 points

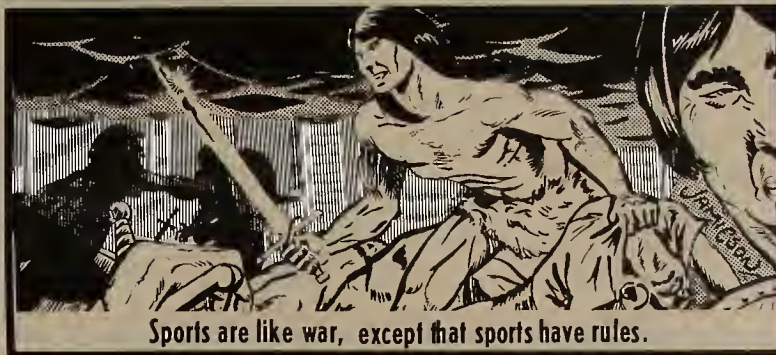

There are points for the other sports but anyone interested can ask about them in the Stores.

For those who play Varsity sports, S-points are given for winning a Varsity "T". For a First "T", 10 points; for a 2nd "T", 8 points.

As before, you can only win up to 10 points per sport per year. Keep track of your S-points so that you make sure you collect any award you should.

Next week — some info on Faculty trophies.

— Rick Brownridge

Sports are like war, except that sports have rules.

Blubling

Who would have thought that a little auction could have instilled in the Engineers such a desire to... win? Last Thursday night, the Skule swimmers took part in another interfaculty swim meet. The 200 medly relay composed of Brownridge, Cragg, Christie, and Jamieson 'came' in first with a time of 2:03.3, five seconds ahead of the field. Others 'winners' were Chris Cragg in the 50-yd. 'Breast' stroke, and Rick Brownridge who won by a C.H. in the 50 yd. backstroke. The team put in a good effort and are showing tremendous spirit. As of this meet, the overall standings find the Engineers in second place, just 2 points away from first place Trinity, and 1 point ahead of 3rd place P.H.E.

— Barry Bowerman

V-Ball

Skulemen came through again (get your mind out of the gutter). To start the season off right both junior and the senior team defeated their opponents. The senior team made a tremendous come while losing 13-6, to defeat the PHE 15-13, and 15-7 in the second game.

The juniors played a much steadier game and downed Forestry 15-4, 15-4.

The teams suffered their first defeat on Tuesday when they played against each other so early in the season. But, did you hear the results? No, then come to liberated Hart House and find out. Yes girls, you can watch your favorite beastie jump up and down now (they do it willingly, too).

As a point of information, the result of Thursday's game (Sr's vs. Jr's) remain confidential since this article was submitted before the game but you can be sure there was one loser.

— Andy Mitrowski

At last!

Lacrosse Report

With our season being half over, our prospects for a successful season are very high. Currently, the team is in first place in the B Division with a 5-0 record. The victories are a result of several factors. The strong goal tending of 4th-year veteran Don Sadowsky is one of the primary reasons. The return of Dale Howard, Bob Walker, Alan Wolfe, Wilson Moe, Dean Elliot, and Ralph Steven from last years C

division champions has provided a strong nucleus. The addition of several new players like Jim Murphy, Nick Burtynk, and Don Cruikshank, has served to strengthen the team. If our quality remains as it has been through the first half of the season a first place finish is evident and we should also make a strong playoff showing.

— Al Wolfe

B-Ball

Senior team has already been chosen from the large turnout we had for the tryouts. It should be an excellent team this year, with a lot of new faces.

If you're still interested in playing for Engineering in the interfaculty league there are places on the junior team; if interested please contact Kenn Lendrum at 925-3015. (We are also looking for a coach for the junior team — a nominal monetary reward is offered.) In the next issue of the Toike I will let you know how to go about applying for class (or department) teams in the intramural league.

First year students keep in mind that there will be a round-robin double elimination basketball tournament for them early in the new year.

Finally the senior team is practising hard three times a week in preparation for the season which starts on Nov. 16. I'll keep you posted as to game times. We would appreciate your support — I'm sure you won't be disappointed.

— Kenn Lendrum

Bugger-all

RUGGER

Yes fans, the Rugger team has done it. Really and truly, we have scored a point this year. At long last they have got it all together and with a concerted effort, and a devil-may-care attitude to the opposition made a head-long rush down field to score our first point of the year. (However, we didn't want to overdo it, so we left the try unconverted). Wayne Maddever made the run. However the St. Mikes team had already scored 2 tries, and that ended that.

This leaves Eng. I out in the cold as far as making the playoffs. We play our final game Tuesday against Trinity A.

Eng. II have fared a little better with a 1-1-1 record. They walked over Trinity B by a score of 10-0 with tries by Paul Thompson and Peter Jarvis and converts by Charles Scott. This should leave them with a chance at the playoffs if they beat Phys Ed. B today at 1:15 on the back campus. Let's see a little support for our boys.

— Peter Newell

Sicher!

In the last issue, the Toike published the ever-famous "Chewing-out the Senior Team", which they deserved. This however, (due to quick publishing?) came out on the day following the team's best effort in the last three starts. (Sooo SOLLLY!) The jelling Skule machine is really coming (spelled with an 'o') along by thrashing the Christians 4-1. Scorers were the ever-reliable Moros — 2, Blenkinsop and Kumpula.

Surprisingly enough, keeping it cool, Skule came forth with another (2-games in a row, WOW!) good against Erindale in a 3-0 shot-out. Here the defence deserves special mention (besides they all want their names in the Toike) so... goalie Steve Forndron and defencemen Nick Zouravloff, John Pokrajac and Steve Mirkopoulos are all good shits. (Due to the lengths of their names, this is the only time they will be published.)

In the junior team, there are no names to mention since they have not managed a goal in their two games. (Against New College 3-0, & Forestry 1-0.) With two games remaining, and having made a strong start, the chances for a play-off are still alive. Improvements, to put it mildly however, are in order.

— Gary Kumpula

F!irst

The Engineering Athletic Society has brought off but yet another first with their first year football tournament. Class GH beat out Class C (13-10) in the finals to take the championship while Class A downed 1st yr. Eng. Sci. 16-7 in a hard fought consolation round. It was a perfect day for the tournament with 6 classes finally fielding teams. Classes that showed were from A,B,C,F,GH and Eng. Sci. The winners and losers and assorted hangers-on retired to the Embassy afterwards to imbibe the prize moneys.

Much thanks must be given to Wayne Maddever and the Skule football team for participating as referees. And also to our illustrious keeper of the time.

Funny! It was here this morning!

This is an intrinsic white space

If you would like to help us fill it, why not cum out to our next (we have faith) make-up week Sunday, at the Engineering Stores.

Extra bodies are always appreciated, and you need not be a Skulman (a girl is nice), but being funny, gross, or both is a must.

P.S.: we don't bite.

7T2 - WERE YOU CAUGHT WITH YOUR PANTS DOWN?

How are you taking the whole employment syndrome? Where were you when the pre-screening deadline came around? Have you looked in the green binder lately? Do you even know what a green binder is for? Are you expecting the companies to come crawling to you with an anguished plea for your presence at their company?

If so, forget it Charlie — you're probably not getting a job this summer (or fall or winter). Because you're going to have to damn well sell your soul to them.

Living in the past. Five or six years ago, companies were lining up to tell to students the way we have to line up to talk to them now. They would rent a hotel suite, wine and dine the students, and practically seduce them into coming to work for their company.

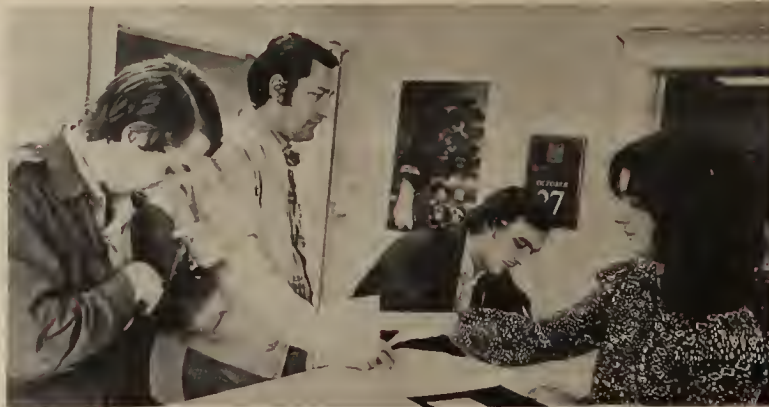

But for the last three years, the number of companies even coming on campus to interview has dropped by 30% each year. This time, the number of companies coming to interview has dropped to about 65 from 97 last year.

Footrace — What is the history of the placement center's placement techniques? In the past interviews were conducted in a helter-skelter fashion. It was literally a foot-race to the center to sign up for interview slots. You know the scene — people camping overnight in the lawn to be first into the office on sign up day. The first few to arrive got twenty interview slots — late-comers got none. Interviews were conducted all winter and people thought that this was dragging the process out too much. Another problem was that a lot of the students who did get interviews were foreign students who didn't have immigration status yet and thus were ineligible to accept a job, even if they did get hired — meanwhile they were taking chances away from other eligibles.

An example of the bad state of affairs was the fact that the Federal Government (Public Service Commission) hired only one engineer last year from U. of T. We fared very badly compared to other universities in this regard. **Concentrated Effort.** It was decided by the faculty and students to go with the concentrated interview program as it would interfere less with the school year. They preferred to cancel lectures for two days and get it over with, rather than continually miss classes all year.

The quantized interview system has several additional advantages. Students tend to get better prepared for interviews since they are keyed-up for these few days and also since they tend to do all their research into the companies at one time. It focuses attention on the employment process. The companies must all work under the same conditions and have the same chance at everybody. This system also allows you to put the job problem out of your mind in January or so, and concentrate on course-works for the rest of the year.

As it has worked out that the concentrated system also has certain disadvantages. In November when the companies come to the campus, many of them do not know what their personnel requirements for the next year will be. Also, many of the interviews are shipped off to some hole in the wall because of the problem of scheduling places for all of them in just a few days. Some interviews were held in laboratories with graduate students working right beside them (a distraction), some were scheduled to use a room that some professor claimed was to be used for an examination at the

"No tickee, no washee!"

same time, so the interviewer had to go out into the hall, and some were scheduled for hallways in the first place! Other disadvantages are that students have little chance to view the over-all job market, companies are forced into the rather unnatural position of deciding to hire, or not to hire —, such a large number of students who they have only seen quickly. Also the intense few days of interviews does not allow a chance to learn from past interviews very well, since it is all over before you know it! (Bang! — you fucked up those interviews — hope the welfare cheque comes in all right). And there were of course, instances of students or of recruiters who did not show up on schedule (or showed up plastered).

Sore Thumb This year the Placement Center had been plugging on your behalf. In June they sent a "Recruiting Kit" to all companies that have expressed interest in the past. This was followed up by letters and phone calls to find out which companies wanted to come to our alma mater.

The Pre-Screening System For the first time, this year the "Recruit Kit" included a description of the newly implemented pre-screening. Under this system (that you ought to know about, if you haven't been keeping up with

developments) students send in applications and resumés to the companies, before the companies come to campus. The companies use these forms as a sieve to strain out the students they most want to talk to, from all the others. This allows the student to have a fair chance of landing a job with the company of his choice and obviously gives the companies a chance to make better use of their interviews.

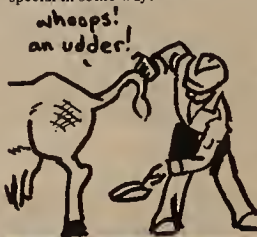

Most of the companies at first were extremely reluctant to participate in this program. However, since this procedure has been initiated they have been very pleased with the results. One recruiter stated that, after reading seventy pre-screening forms, he could easily select the six that he wanted to talk to. They "stuck out like a sore thumb."

Bitch It Dave Currie, your man at the Placement Centre said that the improvement in quality of applications from U. of T. students has been dramatic. He said for the first time, students are really putting a little thought into their resumés and selling themselves to the companies. When Dave tells this to placement officers at other universities, they just laugh in disbelief — students at other schools are putting very little effort into applications and as a result, U. of T. should pick off more than its

usual share of jobs.

After the companies sift through the Pre-screening forms, they notify those students that they want to interview, and the students must schedule some time on the interview days. All companies are supposed to notify you at least one to two weeks in advance of the interviews, if they want to see you.

Remember, in order to make it an interview with any company that is pre-screening, (and almost all are) you have to submit an application that makes you stick out from the masses of the other applicants. Your form has to be special in some way.

The Placement Centre can help you in this. The idea is to write a story that the company is interested in reading, and to do it as concisely as possible.

Place to Sign a List: The Placement Centre had to make a deliberate choice between a) striving to become the "most efficient possible Placement Center (i.e. placing the best students in all jobs as soon as companies come around), or b) making the Centre into an organization "operating in the interests of the students" (i.e. trying to give all students an equal opportunity for all jobs and match up the most appropriate student, though not necessarily the best scholar, with each position.) They chose the latter and are making a concrete effort to create a "student-oriented service".

The Center is now more than just a place to come and sign your name on the list. Besides the recent improvements in job interviewing, they provide job counselling, the career talks that are advertised widely, and a follow-up service for any individuals who did not get any offers the first time.

They still face a severe communications problem with students. They have tried to reach people through the faculty, the class representatives, the various societies, and campus publications, but have found all of those disappointing and ineffectual. Students are still not aware enough of the job market situation and interviewing techniques. The Centre also had a problem getting information and impressions back from students about such things as how popular each company is, and what problems people are having writing resumés.

Ratio Worth It? Do you know how to take an interview? There is literature on this topic in the

Constitutional Conference

Sac is holding a convention before Nov. 30

- 1 Dissolving the Sac constitution as it now exists
- 2 Designing a new central organization with definite responsibilities and fees for student services

YOU have been dissatisfied, now is your chance to make a positive contribution. Prepare written suggestions (briefs) for a new Sac which would serve YOUR INTERESTS better.

ALL incidental fees will be examined.
Briefs should be submitted to the SAC,
c/o 12 Hart House Circle

Employment Handbook, you know. You could also ask for some advice regarding interviews at the Placement Center.

Few people know that interviews are a gruelling experience that can take a lot out of you. Don't schedule them too close together. Dave Currie, Placement Centre Director, recommended at least one hour breaks between interviews. This allows for possible backlog in the interview schedule and gives you time to collect your composure, comb your hair and walk to the next one (which sometimes may be a long way off).

Many companies complain that students often walk in "cold" having no idea what to ask about the company, (not having read the literature) and generally present themselves poorly. BE PREPARED.

Last year the interview to offer ratio was twenty to one. This year the thanks mainly to pre-screening, Dave Currie is optimistic that the ratio will be higher since the recruiters already know something about the people they will be seeing.

No Shows Of course one problem is that the companies just aren't showing up in the kind of numbers they used to. The slump in the economy is forcing companies to tighten their belts, reduce budgets, and seek a smaller quota of new employees.

Many companies are becoming more selective about the campuses they visit. American companies are turning out in much smaller numbers than a few years ago because of stiffer visa regulations for Canadians going south to work. Companies from Western Canada are finding that us Easterners just do not tend to stay out west for more than two or three years, so many of them are refusing to come.

In some cases students get so fed up with the interviews that they decide not to show up (or only for the last few. If a company has met three of four of these No Shows, they get a bad impression of U. of T. and may not come back next year. Remember your actions now, can influence the opportunities of four U. of T. students looking for jobs next year as well (and that might be yourself.)

So we stress that it is worth your while to take the whole employment scene seriously, know what companies are available, and requiring what kind of person, and know what to ask and what to say when you get to the interview. In preparation, you can do no better than to go to the Placement Centre. The counsellors there deal directly with employers every day. They know what the employers are looking for and want. The Centre is on your side, they'll go out of their way to help you. But they can't come and see you — you have to move your butt and help yourself.

Summer Jobs If you are not in fourth year and want a summer job, or if you are going to graduate school and want to make some money before you start next fall, there is no pre-screening system to help you. As you'd

expect, there is not too much available. You just have to check the Placement Centre bulletin board every now and then, to sign up for any interviews that come along. Some of the old reliable standbys for summer employment are Bell Northern Research Laboratories, the Government, Defence Research Board, National Research Council and Atomic Energy of Canada.

Do It Yourself Of course all this talk about pre-screening doesn't mean that you can't go and talk to companies yourself. People are very impressed if you take the initiative to go and request an interview with some big wheel and discuss with him the type of work the company does and employment prospects for the future. This applies to summer jobs as well as permanent jobs. And in your pre-screening form or application, you will have an ace up your sleeve if you can mention that you have already talked to some personnel officer from another branch office of that company.

People say "But how do you bust in on an office like that or phone for an interview?" The answer is the same as when wondering about the possible exploitation of some nubile. Just get your applications in on time. Or you didn't get an interview (remember that employers have to let you know one to two weeks before the interviews come up — once you've heard, it's up to you to contact the central office about an interview time). Or nothing came of the interviews — no job offers — what now?

Of course there are the usual last resorts such as leading a capitalist revolution in Red China or being a star writer for the Varsity, but the Placement Center will try to help you avoid that start of degradation.

The Centre has green binders of companies that are offering new jobs which are updated daily.

There are companies that did not meet the concentrated interview program deadline. They

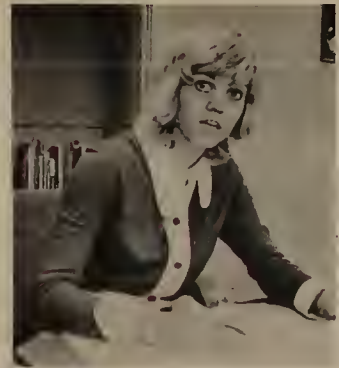

will be coming up to the campus throughout the rest of the year with the major concentration in late February to early March.

After Christmas, you can sign up for the Placement Centre Personnel Referral Service. As they are notified of new jobs they will send out a little white card to any students who they think might be contenders for each position. The white card invites you to come in and have an interview whenever that company is on campus. This process will be done on an individual basis starting around February and continuing throughout the summer. If you are looking for jobs after school ends the Centre encourages frequent individual counselling sessions to discuss interview strategy and suggests other possibilities. They request at least one such interview every three months or so. The reason for this is that after a summer of continual frustrating job refusals, some guys get pretty depressed, and this pretty well jeopardizes their chances for future interviews. So the Centre provides sympathetic, understanding guidance to people in this situation. The Centre placed 600 jobs in this way last year and expects to place 1,000 this year. They want to keep track of who has got a job and who have not for their own records, and for your good. So if you do enlist with the Personnel Referral Service (or deal with the Centre any way for that matter) Please Tell Them When You Get A Job And Can Be Removed From Their Files.

Some of the people who are in this position exert some effort to do something for themselves. One poor guy last summer sent out 400 applications and got no returns! On the other hand some amazingly lazy people actually sat on their butts last summer waiting for little white cards in the mail from the Centre and sent out less than five applications in as many months.

The E.I.C. and P.E.O. have job facilities that you can investigate.

A Couple of Good

Reasons To Visit

The Placement Center

There are also various professional job placement centres: The Technical Services Council on the eighth floor at 130 Bloor St. W. specializes in placing engineers

and other professionals. So you see, there are many possible ways of getting jobs. And other people are working damn hard to find you a job. What are you doing?

OLD JOKES HOME

There was a young lady named
Gluck
Who suffered some terrible luck
Stripping off in a punt
She fell off the front
And was pecked in the dunt by a
cuck.

The medsmen arrived in Union
Station and when he went to the
wash room noticed a machine with
a sign "Your Wife Away
from Home". Examining the
machine he discovered that it
had a nice neat hole. He
unzipped his pants, inserted the
required coins and made his
entry. Immediately he
experienced a horrible pain then
quickly withdrew.

There on the end of it was a
neatly sewn button.

Mother (entering the room
unexpectedly): Why I never...
Daughter: "Oh mother you must
have".

The nurse was being examined
by a gynecologist. As he looked
inside her, the doc asked "Have
you had a checkup here
recently?"

"No", she answered, "just a few
Hungarians and Poles".

Engineers: Tri-weekly.
Medies: Try weekly.
Arties: Try weakly.

Metallurgist: A man who can
look at a Platinum blonde and
tell whether she is a virgin metal
or a common (wh)ore.

Little boy passing parent's room
- "Ye Gads! And they sent me
to a psychiatrist for sucking my
thumb".

Message found on a condom
package in a Scarborough college
washroom.

"This Prophylactic is made of
high quality genuine latex to
meet rigid specifications".

A nature lover divested himself
of his clothes so that the sun
could tan him all over. But in the
process his appendage was
severely sunburned. While
making love that evening the
pain became unbearable. He
proceeded to the kitchen in
quest of something to soothe it.
In desperation he immersed it in
a nice tall glass of cold
evaporated milk, and was sighing
in relief when his SMC girlfriend
came in the room.
"Oh", she cried, "I've always
wondered how you load one of
those things".

Insofar: Point of no return.

The girl selling tickets at the
railway station made Jane
Mansfield look like a ten year
old. The nervous male customer
couldn't keep his eyes off her.

"Will you stop staring and tell
me what city you want a ticket
to?" she snapped at last.

Back came the reply:

"I'm not staring at you. Just give
me two pickets to Tittsburg".

Why does an artsie have a hole in
his pants pocket?
So he can count to eleven.

Dave the engineer had been to a
wonderful party last night, but
he couldn't remember where it
had been or who had given it.
The only thing that persisted in
his mind was the memory of a
golden coloured toilet. Dave just
had to find out so he started
walking around town and asking
his friends if they had a golden
toilet.

He got either negative responses
or strong hints that he should
fuck off. He then began calling
at strange houses and at length
came to a nice little house and
rang the doorbell. "What can I
do for you?" asked the beautiful
woman who answered the door.
Well, said Dave, I just wanted to
ask if you folks happened to
have a golden toilet. Instantly
the woman's eyes grew bright
and she turned and yelled over
her shoulder: "Hey Harry!
Here's the guy who took a crap
in your tuba last night!"

The gourmet engineer took his
girl to dinner at a reputable
restaurant just east of Yonge. He
had phoned the day before and
asked that a 'Canard a l'orange'
be prepared. When the duck
arrived at the table it was golden
brown and glistening and had
every appearance of being
precisely right. But when the
engineer applied his knife the
bird was as tough as saddle
leather. The engineer was furious

and called for the waitress telling
her "take this back to the chef
and tell him to shove it up his
ass!"

"Jan" protested his date, "Shut
up" said Jan.

The waitress took the duck into
the kitchen. A few moments
later she was back.

"Pardon me, Sir," she said, "but
the chef says to tell you there
are two chickens and a T bone
streak ahead of you".

There was a young harlot from
Kew
Who filled her vagina with glue

"She said with a grin,
If they pay to get in,
They'll pay to get out of it,
too".

Cocktail parties were invented
by dogs.

Two ladies were sitting on a
beach. One of them decided to
go for a swim. When she
returned she put her hands down
between her breasts and
withdrew a dry cigarette.
Noticing the look of amazement
on her companions face, she
explained:

"I have a great system. I placed a
cigarette in a rubber protective
thing and it doesn't get wet. You
can buy them at drug stores.

The following day, the second
lady went into a drug store and
asked the clerk if he had any
protectors.

"Sure," said the clerk, "any
particular kind?"

"Why yes," replied the lady, "I
want it to fit a camel".
